International application No. PCT/JP03 / 0.9098

Box No. V	Reasoned statement is citations and explana	under Articlations suppo	le 35(2) with regard to novelty, inventive step or industrial applicability;		
1. Statemen	nt				
Novel	elty (N)	Claims Claims	2-21,24	YES NO	
Invent	tive step (IS)	Claims Claims	1-24	YES	
Indust	trial applicability (IA)	Claims Claims	1-24	YES NO	

2. Citations and explanations (Rule 70.7)

The following documents have been considered for the purpose of this report:

D1 = WO 98/00475 A1(MERC PATENT GMBH), 1998.01.08

D2 = JP 2002-196139 A(FUJI PHOTO FILM CO., LTD.), 2002.07.10

D3 = JP 2001-91742 A(FUJI PHOTO FILM CO., LTD.), 2001.04.06

The subject matters of claim 1, 22-24 do not appear to have novelty or inventive step in view of the D1. Lines 30-33 in the page of 11 in the document describes the polymerizable mesogenic material, which corresponds to an anisotropic layer, is coated and cured directly onto a polarizer. The document does not explicitly mention a case that an orientation layer is formed on the polarizing membrane. However, since it is well known to use an orientation layer under the polymerizable mesogenic material, a skilled person can easily put the orientation layer on the polarizer described in D1, if necessary.

The subject matters of claim 2-4 do not appear to involve inventive step in view of the D1 and D2. Both the documents describe that an anisotropic layer consists of rod-like liquid crystal molecules. The specification of the anisotropic layer can be appropriately set by a skilled person taking into consideration the specification of the liquid crystal cells and the limitation described in those claims are not so extraordinary in view of D2.

The subject matters of claim 5-8 do not appear to involve inventive step in view of the D1 and D2. The thickness of the polarizing membrane can be appropriately set by a skilled person. A light-diffusing layer, an anti-reflection layer, and a transparent support are normally used in the technical field.

The subject matters of claim 9-21 do not appear to involve inventive step in view of the D1, D2, and D3. The D2 describes there are both the first anisotropic layer and the second anisotropic layer on a polarizing membrane and the D3 describes the both anisotropic layers consist of discotic liquid crystal molecules, thus, a skilled person can easily put those two layers instead of one anisotropic layer described in the D1. The detailed specification of the anisotropic layers can be appropriately set by a skilled person as above-mentioned.
